Thesis submitted to the Centre for Graduate Studies, Universiti Pertahanan Nasional
Malaysia, in fulfilment of the requirements for the Degree of Doctor of Philosophy
(Maritime Technology)

ABSTRACT

The automotive industry's role in environmental sustainability has gained significant attention globally, with carbon dioxide (CO₂) emissions being a primary concern. This study investigates the factors influencing CO₂ emissions in automobiles within the context of eco-friendly frameworks. A comprehensive analysis is conducted using Partial Least Squares Structural Equation Modelling (PLS-SEM) and Artificial Neural Network (ANN) technology to understand the intricate relationships between various automotive factors and their impact on CO₂ emissions.

The study identifies critical variables, including engine CC, horsepower, fuel type, track width, weight, aerodynamics, car segment, official euro class, transmission, emotion, knowledge and driving behaviour, hypothesized to influence CO₂ emissions. Adopting PLS-SEM, these variables' direct and indirect effects on emissions are examined, providing insights into their relative importance and interdependencies. Moreover, the ANN model is deployed to explore nonlinear relationships and predict CO₂ emissions more accurately.

Results indicate that engine efficiency and fuel type significantly affect CO₂ emissions, with higher-efficiency engines and alternative fuels demonstrating a considerable reduction in emissions. Additionally, vehicle weight emerges as a crucial determinant, with lighter vehicles exhibiting lower emissions due to enhanced energy efficiency. Moreover, driving behaviour, encompassing factors such as speed patterns

and acceleration rates, influences emissions, emphasizing the importance of eco-conscious driving habits.

Integrating PLS-SEM and ANN technology enables a robust analysis of automotive factors contributing to CO₂ emissions, offering valuable insights for eco-friendly automotive frameworks. By understanding these relationships, policymakers, manufacturers, and consumers can make informed decisions to mitigate emissions and promote sustainable transportation solutions. Future research could explore additional variables and refine modelling techniques to further enhance the understanding of CO₂ emissions in the automotive sector and facilitate the transition towards a greener mobility landscape.

ABSTRAK

Peranan yang dimainkan oleh industri automotif dalam kelestarian alam sekitar telah mendapat perhatian penting di peringkat global, dengan pelepasan karbon dioksida (CO₂) yang tidak terkawal telah mengakibatkan ketidakseimbangan seluruh dunia. Kajian ini bertujuan mengenal pasti faktor-faktor yang mempengaruhi pelepasan CO₂ oleh automotif dalam konteks rangka kerja mesra alam. Dengan menggunakan teknologi *Partial Least Squares Structural Equation Modeling (PLS-SEM)* dan *Artificial Neural Network (ANN)*, analisis dijalankan secara komprehensif untuk memahami hubungkait diantara pelbagai faktor kejuruteraan, bentuk kenderaan dan pemanduan serta kesannya terhadap pelepasan CO₂.

Kajian bermula dengan mengenal pasti pembolehubah utama dalaman, termasuk CC enjin, kuasa kuda, jenis bahan api, lebar trek, berat, aerodinamik, segmen kereta, kelas euro rasmi, transmisi dan pembolehubah luaran seperti pengetahuan, emosi dan tingkah laku pemanduan, yang dihipotesiskan boleh mempengaruhi pelepasan CO₂. Dengan menggunakan PLS-SEM, kesan langsung dan tidak langsung pembolehubah ini terhadap pelepasan CO₂ dikaji agar dapat memberikan pandangan tentang kepentingan relatifnya dan saling ketergantungan. Selain itu, model ANN digunakan untuk meneroka perhubungan tak linear dan meramalkan pelepasan CO₂ dengan lebih tepat.

Keputusan menunjukkan bahawa kecekapan enjin dan jenis bahan api memberi kesan ketara kepada pelepasan CO₂, dengan kecekapan enjin yang lebih tinggi dan

bahan api alternatif menunjukkan pengurangan yang ketara dalam pelepasan CO₂. Selain itu, berat kenderaan muncul sebagai penentu penting, dengan kenderaan yang lebih ringan menunjukkan pelepasan yang lebih rendah disebabkan oleh kecekapan tenaga yang dipertingkatkan. Selain itu, tingkah laku pemanduan, merangkumi faktor seperti corak kelajuan dan kadar pecutan, didapati mempengaruhi pelepasan, menekankan kepentingan tabiat pemanduan yang mementingkan alam sekitar.

Penyepaduan teknologi PLS-SEM dan ANN membolehkan analisis mantap dilakukan bagi mengenal pasti faktor automotif yang menyumbang kepada pelepasan CO₂, menawarkan cerapan berharga untuk rangka kerja automotif mesra alam. Dengan memahami hubungan ini, penggubal dasar, pengilang dan pengguna boleh membuat keputusan termaklum untuk mengurangkan pelepasan dan mempromosikan penyelesaian pengangkutan yang mampan. Penyelidikan masa depan boleh meneroka pembolehubah tambahan dan memperhalusi teknik pemodelan untuk meningkatkan lagi pemahaman kami tentang pelepasan CO₂ dalam sektor automotif dan memudahkan peralihan ke arah landskap mobiliti yang lebih hijau.

ACKNOWLEDGEMENTS

I extend my deepest gratitude to the individuals and institutions who have significantly contributed to completing my doctoral dissertation. Foremost, I am immensely thankful for the exceptional guidance and mentorship provided by my esteemed supervisors, Associate Professor Ts. Dr. Norshahriah Binti Abdul Wahab and Professor Dr Abdul Ghafor bin Hussein. Their profound expertise, unwavering support, and insightful advice have been instrumental in shaping the direction of my research and academic pursuits. Their invaluable mentorship has been instrumental in shaping my intellectual and professional growth. I am genuinely grateful for her guidance and support.

I want to extend my heartfelt gratitude to my committed life partner, Mohd Firdaus William bin Abdullah, for his unwavering support, profound understanding, and exceptional patience over the demanding course of my scholastic endeavours. His steadfast belief in my capabilities has been a driving force in my scholarly endeavours. To my esteemed children, Mohd. Syuqrie De Gracious, Mohd Fiqqrie De Gracious, and Mohd Zyqqrie De Gracious, I extend my heartfelt gratitude for your rational insight, unwavering resilience, and selflessness displayed during the rigorous path of my academic journey. Your firm affection and companionship have been a continuous source of inspiration and joy.

I wish to express my heartfelt gratitude to the Deans of the Faculty of Defence Science and Technology and the Dean of the Faculty of Defence Studies and Management for their invaluable contributions in providing crucial resources and cutting-edge facilities that greatly facilitated the successful execution of my research.

In addition, I express my gratitude to the devoted colleagues and staff in the Faculty of Defence Studies and Management for promoting a strong feeling of unity, encouraging a cooperative mindset, and cultivating an intellectually engaging academic atmosphere. I am very appreciative of your persistent support and donations, which have been crucial in defining my educational experience. Lastly, my heartfelt thanks go to the Dean of UPNM Post Graduate Studies and all who have played significant roles in bringing my achievements to fruition. Your support and contributions are deeply appreciated.

Rozita Binti Husain

APPROVAL

The Examination Committee has met on **8 March 2024** to conduct the final examination of **Rozita Binti Husain** on his degree thesis entitled **Analysing Significant Automobile Carbon Dioxide (CO₂) Emission Factors for Eco-Friendly Automotive Framework Using Descriptive Analytics and Artificial Neural Network (ANN) Technology.**

The committee recommends that the student be awarded the of Doctor of Philosophy (Maritime Technology).

Members of the Examination Committee were as follows.

Professor Dr Nanthini A/P Appan

Fakulti Sains Dan Teknologi Pertahanan
Universiti Pertahanan Nasional Malaysia
(Chairman)

Ts Dr Nur Diyana Binti Kamarudin

Fakulti Sains Dan Teknologi Pertahanan
Universiti Pertahanan Nasional Malaysia
(Internal Examiner)

Associate Professor Dr Mohammad Nazir B Ahmad @ Sharif

Institut Informatik Visual
Universiti Kebangsaan Malaysia
(External Examiner)

Associate Professor Dr Mustakim Melan

Faculty Of Management

Universiti Sultan Azlan Shah

(External Examiner)

APPROVAL

This thesis was submitted to the Senate of Universiti Pertahanan Nasional Malaysia and has been accepted as fulfilment of the requirements for the degree of **Doctor of Philosophy (Maritime Technology)**. The members of the Supervisory Committee were as follows.

Associate Professor Ts Dr Norshahriah Binti Abdul Wahab

Fakulti Sains Dan Teknologi Pertahanan
Universiti Pertahanan Nasional Malaysia
(Main Supervisor)

Professor Dr Abdul Ghafor Bin Hussin

Fakulti Sains Dan Teknologi Pertahanan
Universiti Pertahanan Nasional Malaysia
(Co-Supervisor)

UNIVERSITI PERTAHANAN NASIONAL MALAYSIA

DECLARATION OF THESIS

Student's full name : ROZITA BINTI HUSAIN
Date of birth : 01-01-1964
Title : Analysing Significant Automobile Carbon Dioxide (CO₂) Emission Factors for Eco-Friendly Automotive Framework Using Descriptive Analytics and Artificial Neural Network (ANN) Technology.
Academic session : 2023/2024

I hereby declare that the work in this thesis is my own except for quotations and summaries which have been duly acknowledged.

I further declare that this thesis is classified as:

☐ **CONFIDENTIAL** (Contains confidential information under the official Secret Act 1972)*

☐ **RESTRICTED** (Contains restricted information as specified by the organisation where research was done)*

☐ **OPEN ACCESS** I agree that my thesis to be published as online open access (full text)

I acknowledge that Universiti Pertahanan Nasional Malaysia reserves the right as follows.

1. The thesis is the property of Universiti Pertahanan Nasional Malaysia.
2. The library of Universiti Pertahanan Nasional Malaysia has the right to make copies for the purpose of research only.
3. The library has the right to make copies of the thesis for academic exchange.
